CRYPTOBET.

IGaming Platform.

CRYPTOBET TOKEN CBT

Our mission is to provide a truly transparent and honest online casino and a betting office with low transaction costs and an almost instantaneous withdrawal of funds for any amount. In order to achieve this goal, we rely on our current platform to adapt the opportunities created using blockchain technology. In addition, we plan to share the results of our work with the blockchain casino community, offering various gaming solutions that easily adapt to other platforms.

What problems does Crybet solve?

1. Equity At Crybet, all transactions and settlements will be based on the Ethereum network and its targeted smart contracts. Understanding Ethereum smart contracts, the gates to profit will be closed, unlike Bitcoin's blockchain vulnerabilities.

2. TRANSACTION COST AND PROCESSING TIME

We have developed a system and a set of solutions that will allow us not only to transfer the final result of player bets to the Ethereum blockchain, but will also allow almost instant payments with low transaction costs, even at the lowest rates.

Bookmaker

All players on our platform will be able to place bets on the most popular events in the world of sports. A lot of work has already been done to ensure a wide range and high betting coefficients for various sports. Given that bets will be calculated using a smart contract , the platform will not charge taxes, as in conventional bookmakers. This will have a positive effect on the coefficients. The calculation of tickets will be carried out as quickly as possible that will allow the player to make more bets.

Platform sections:

- roulette game;

Roulette is a game of chance, in the classic version of which it is necessary to guess which of the numbered cells located on the spinning wheel will get a ball launched in a circle. In classic roulette, numbers from 1 to 36, as well as "0", also called "zero," are applied to the wheel. Loss bets are placed on the gaming table, where numbers from 0 to 36 are also located and additional betting options are indicated.

The croupier offers all the players sitting at the table to make bets (depending on the type of roulette, they may differ). The table is not only the roulette itself, but also a field on which the same numbers are displayed in the form of a table as on the roulette wheel, as well as various types of bets. As soon as the croupier pronounces the phrase that has already become classic: "Bets have been placed, there are no more bets," the acceptance of bets is considered completed and the croupier spins the roulette wheel in one direction and throws the ball in the opposite. It is forbidden to touch the rotating wheel and the ball or otherwise act on them. In online roulette, the user also cannot change the bet or make an additional one after the wheel began to spin. As soon as the ball enters the cell, the croupier announces the winning number. The income from the winnings is distributed between the winning bets and the casino, if "0" is dropped, all bets go to the casino income. Keep in mind that in all casinos there are restrictions on both the minimum and maximum bets when playing roulette for each position.

Payout ratios in case of a win are usually standard, but may vary depending on the type of roulette. Standard coefficients are indicated hereinafter. It must be kept in mind that the very designation of rates may vary. For example, when betting on "red" the payout can be indicated as 2: 1, and this means that if you bet $ 1, the player will receive $ 2 in case of a win, which consists of a returned bet of $ 1 and a won $ 1. This bet shows the total win. But in some casinos, such a payout can be indicated 1: 1 and shows a net win. This means that with a bet of $ 1 net win would technically mean a return of initial bet and additional $ 1. That is, in total the player receives the same $ 2.

In other words, if we are talking about the total winnings, then with a bet of \$ N and a payout of, say, 17: 1, if successful, the player will receive 17 x \$ N. And if we are talking about a net win, then the bet will be designated as 16: 1, and then the player will receive 16 x \$ N + \$ N. And this is 17 x \$ N. This often confuses novice players, but you just need to understand whether it is a win or a net win. Hereinafter, the coefficients mean a net gain.

- black-Jack;

The first mention of blackjack dates back to 1601. The famous writer and, concurrently, a lover of gambling Miguel de Cervantes, mentioned this gambling in his travel notes. The author of "Don Quixote" described it as an exciting card game, "from which it is impossible to break away."

And for 400 years, blackjack is one of the most popular games in the world, which is played online and offline - in casinos, offices and even at parties. Thanks to simple rules and simple game conditions, even a child can play it.

Many beginners mistakenly believe that the basic rule of blackjack is to gain 21 points. Or at least close to that value. This is not always correct.

The player plays blackjack against the dealer, who is the same player who scores points. Therefore, you can win in black jack without having the maximum number of cards. The main thing is to beat the dealer. The strategy to score exactly 21 points could have played a trick on a newcomer in no way.

First you need to find out the basic rules of the game.

The first thing you need to learn is the values of the blackjack cards, which are unchanged in most game versions. They are as follows:

Cards 2-10 — nominal value (2 — two points, 3 — three points etc).

Jack, Queen and King — 10 points.

Ace — 1 or 11 points depending on combination.

The number of decks used in a game session may vary, depending on the version of blackjack. In most online casinos, blackjack is played with eight decks.

The dealer distributes the cards. First, for each player, including himself, he gives 2 cards. Depending on the amount of points you have to decide whether to take more or not to take risks (depending on the summed value).

At the same time, each player has few rights: you can split the card into two hands (if you got cards of the same value) or double the bet by taking another card. The dealer deals to himself and the cards are opened for counting.

Blackjack is a card combination of an ace and any card with a value of 10 points - Jack, Queen, King. Complete victory. But, as mentioned earlier, a smaller amount may be enough to win, depending on the situation (if the dealer has a lower amount).

- poker;

Several people play poker at the same table (at least two, at most ten). They play a standard card deck of 52 cards.

The goal of the game is to take possession of as many chips / money as possible; lose as little as possible. Moreover, the number of distributions is not limited.

During the game, the player has the right to leave the table, the game will continue, the cards will not be dealt to him only in cash games. In tournaments, if a player moves away, he is still obliged to put the blinds / antes, and his cards will automatically be sent to the pass.

Game duration

In tournament poker, the game will continue until the winners are determined. In cash games, everyone plays as much as they wish.

How many cards are dealt in poker?

Two cards are allocated to each. Nobody sees them, except those with whom they are. Then five cards are laid on the table, firstly three, and then two more, one by one.

To understand how to play poker, first of all you need to remember the combinations and their ranks:

1. Royal Flush – major and most rare combination in poker, which consists of 5 cards of the same suit from 10 to ace (in other words, this is the major of straight flushes or major straight of the same suit).

2. Straight-flush - a combination of 5 cards of the same suit in order or in other words - suited street.

3. Four of a kind - 4 cards of the same rank (for example, A ♥ A ♠ A ♣ A ♦, 6 ♦ 6 ♣ 6 ♠ 6 ♥, Q ♥ Q ♦ Q ♣ Q ♠, etc.).

4. Full House - a combination of a pair of cards of one rank and three cards of another rank at the same time (pair + set in one combination). Full House superiority is determined by the three identical cards that are included in it.

5. Flush - 5 cards of the same suit.

6. Straight - 5 cards in straight order (for example, 2-3-4-5-6 or 5-6-7-8-9 or 9-10-J-Q-K).

7. Set / Three (Three of a kind) - 3 cards of the same rank.

8. Two pairs (Two Pairs) - a combination in which there are 2 pairs of cards of the same rank at the same time.

9. A pair (Pair) is 2 cards of the same rank (identical cards of different suits).

10. The highest card – weakest hand. If a player does not have any of the above combinations, then his combination is the highest card, which is determined by the highest ranking card in the player's card set. If several players do not have a single combination, the winner is determined by the highest card.

11. It is also worth considering Kicker - a card that is not included in the poker hand, but determines the winner if the players have the same strength combination. For example, one player has AQ, another has A10 and A-J-8-2-J is put on the table. Both players have a combination of two pairs (AA-JJ), but the first has a kicker queen and the second has 10, so the first player wins the hand. If the king were placed instead of 8 or 2 on the table, he would be a kicker for both players and then they would share the bank.

- Developers will be able to add their games, making part of the profit;

Each game developer would add the game on CryBet. The developer would gain the partial profit from his (or her) game to his (or her) own wallet.

- Jackpot drawing among token holders;

Part of CryBet whole jackpot would be regularly awarded to a single holder of CBT token.

- Great affiliate and referral program.

There would be massive partnership programs started during pre- and after launch phase.
